

XM Radio NEEDS to have local information/broadcasts like weather, traffic, and other important areas because it is not always available by local radio FM stations. FOR EXAMPLE, we just had a tornado in our area last week, and we could not find anything on the FM stations except for a 10 second blurb followed by music. With dedicated XM Satellite local weather, we could have know that there was a tornado warning. IN FACT, MORE LOCAL SATELLITE XM STATIONS ARE NEEDED!!!
